Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

ABSTRACT OF THE DISCLOSURE

A

A consistent set of data is supplied to a software application from databases. When a particular set of data is identified, a first process is requested to obtain a snapshot time from a database server associated with the first database. The snapshot time causes all subsequent reads of the first database by the first process to return data that reflects a database state associated with the snapshot time. A first set of data in the first database is locked in order to produce a copy of data from a first database. After locking the first set of data, a plurality of processes are requested to obtain snapshot times from a database server associated with the first database. The snapshot times cause all subsequent reads of the first database by the plurality of processes to return data from the first database as of the snapshot times.

REASONS FOR ALLOWANCE

3. The following is an examiner's Statement of Reasons for Allowance:

The prior art made of record, not teaching nor suggesting the various embodiments of the independent claims, does not warrant a rejection under 35 USC, Sections 102 or 103.

In claim 1, the claimed 'requesting a first process to obtain a snapshot time from a database server associated with the first database, wherein the snapshot time causes all subsequent reads of the first database by the first process to return data that reflects a database state associated with the snapshot time' and 'after the first process obtains the snapshot time, causing the first process to extract the particular set of data from the first database' are not disclosed, taught or suggested by any prior art. Claims 2-10 present further limitations.

In claim 11, the claimed 'requesting a plurality of processes to obtain snapshot times from a database server associated with the first database, wherein the snapshot times cause all subsequent reads of the first database by the plurality of processes to return data from the first database as of said snapshot times' and 'using a successful set of said plurality of processes to extract a copy of the first set of data from the first database, wherein said successful set includes only those processes of the plurality of processes that were assigned a snapshot time within the particular period of time' are not disclosed, taught or suggested by any prior art. Claims 12-21 present further limitations.
